

CHAPTER IV CLOSING

4.1 Conclusions

Digital security provides many good influences in daily life for the people of Indonesia. Digital phenomena and security in global defense provide the development of every activity in human life digitally. It should be noted that everything has advantages and disadvantages, including in the digital world. Everything can be an opportunity and challenge in everything that people do on social media. Maintaining digital security can prevent various cyber threats that occur at any time. The cooperation of the National Cyber and Crypto Agency (BSSN) with international organizations that oversee the world's cyber issues and the International Telecommunication Union (ITU) has become cyber diplomacy in the world. International Telecommunication Union (ITU) becomes cyber diplomacy in improving digital security in Indonesia. Improving digital security in Indonesia will provide better results in the ongoing monitoring of digital security in Indonesia. This cooperation also builds the confidence of the Indonesian people in diplomacy with other countries by sharing important information to maintain peace and digital security.

The cooperation between BSSN and ITU in improving digital security in Indonesia, to focus on solving digital problems, has many positive impacts in strengthening digital security infrastructure, BSSN and ITU can invite the public as internet users, to be more aware and careful of challenges and threats in the digital

world. The cooperation between BSSN and ITU has shown a positive impact in strengthening digital security in Indonesia. This is shown by several things, including;

(a) Strengthening digital security infrastructure starting from the rapid development of information and communication technology that produces digital infrastructure in the form of internet telecommunication services and the dissemination of public information. (b) Assisting digital cooperation in the pandemic era can be seen from the restrictions on face-to-face diplomacy meetings so that it is transferred to physical and digital diplomacy or hybrid diplomacy, diplomacy is still established even though it is at a distance. (c) Increasing state resilience through cyber diplomacy, in the form of cyber defense through cyber-based military is very important for Indonesia.

4.2 Suggestions

The author considers that the cooperation between the National Cyber and Crypto Agency (BSSN) and the International Telecommunication Union (ITU) has a significant impact on improving digital security in Indonesia. In terms of social, economic, and political security, this cooperation can achieve its goals in maintaining cyber world order. The author hopes that this discussion can be studied more deeply for further researchers by looking at the impact of this international cooperation through technological developments and anticipation of further cyber threats.
